Paytience — 2-week income breakdown, Lucid 25K → 150K

Finalized MAIN strategy (NOISE $250 stop + afternoon fade $250 stop, MNQ) · automatic size per account with the drawdown brake (Regular / High-risk buttons) · Databento MNQ 1-minute replay 2021-11-01 → 2026-10-30 (1,245 trading sessions) through each plan's own Lucid rules. Payout requested every 2 weeks, 90% split.

Summary

• **Best overall:** Pro 150K. Regular (3 micros, brake to 2) ≈ **$881 every 2 weeks for 5 accounts**, typical first year $21,072, 24% of funded accounts bust in year 1. High risk (4 micros, brake to 2) ≈ **$952 / 2 wk**, typical year $23,706, bust 27%.

• **Per account**, divide the 5-account figures by 5 (accounts take the same trades, so they pay and bust together).

• **Pro beats Flex at every size** (Flex pays 50% of profit per payout and locks the loss limit on payout).

• **High risk only helps on 150K.** On 100K it pays the same as Regular with a lower typical year.

• **2024–2026 was harder than 2021–2023** (bust rates roughly double); accounts funded in 2025 mostly busted in the weak Jan/Jul 2026 months. Start with 1–2 accounts and scale after live results match.

Lucid Pro — all sizes

Plan	Profile	Micros	Brake	Worst trade	Eval pass/bust	1 acct / 2 wk	5 accts / 2 wk	5 accts / yr (typical)	5 accts / yr (avg)	Funded bust yr1
Pro 25K	Regular	1	—	$250	63% / 35%	$63	$317	$4,500	$8,232	57%
Pro 25K	High risk	1	—	$250	63% / 35%	$63	$317	$4,500	$8,232	57%
Pro 50K	Regular	2	<50% → 1	$500	57% / 29%	$113	$564	$13,070	$14,664	44%
Pro 50K	High risk	2	<50% → 1	$500	57% / 29%	$113	$564	$13,070	$14,664	44%
Pro 100K	Regular	2	<30% → 1	$500	66% / 23%	$129	$643	$16,025	$16,723	26%
Pro 100K	High risk	3	<50% → 1	$750	63% / 22%	$127	$637	$11,250	$16,564	24%
Pro 150K	Regular	3	<50% → 2	$750	67% / 22%	$176	$881	$21,072	$22,918	24%
Pro 150K	**High risk**	**4**	<50% → 2	**$1,000**	**69% / 25%**	**$190**	**$952**	**$23,706**	**$24,760**	**27%**

Eval: 120 sessions for 25K/50K, 250 for 100K/150K (bigger targets). 'Typical' = median outcome; the 25% of worst start dates earn $0 on most plans. Eval fees not subtracted.

Lucid Flex — all sizes

Plan	Profile	Micros	Brake	Worst trade	Eval pass/bust	1 acct / 2 wk	5 accts / 2 wk	5 accts / yr (typical)	5 accts / yr (avg)	Funded bust yr1
Flex 25K	Regular	1	—	$250	58% / 38%	$46	$231	$3,065	$6,001	61%
Flex 25K	High risk	1	—	$250	58% / 38%	$46	$231	$3,065	$6,001	61%
Flex 50K	Regular	2	<50% → 1	$500	54% / 30%	$76	$379	$8,100	$9,867	59%

The finalized strategy (what Paytience trades)

• **NOISE** — intraday momentum on MNQ (Zarattini, Aziz & Barbon 2024): hourly checks 10:00–15:00 ET; enter when price closes outside the 14-day noise band; exit when the hourly close crosses back through the band/VWAP (trailing); flat 16:00; max 3/day; broker emergency stop $250 per micro.

• **Afternoon fade** — only on days NOISE has not traded: 13:00–15:29 ET, close beyond VWAP ± 2 standard deviations → fade back toward VWAP (target = VWAP), $250 stop per micro, flat 15:55, 1 per day. Fade trades PAPER accounts first.

• **Automatic size** (Strategy page buttons) — Regular: 25K 1 · 50K 2 · 100K 2 · 150K 3 micros. High risk: 100K 3 · 150K 4. **Drawdown brake** in both: when the cushion above the trailing loss limit falls below 30–50% of the limit, trade fewer micros (Regular: 50K/150K below 50%, 100K below 30%; High risk: below 50% on every size) until it recovers.

• **Every trade still passes all safety checks**: Lucid DLL / MLL room, kill switch, one position per account, no hedging, news blackouts, attestation, 16:40/16:44 flat. Default PAPER; LIVE needs the explicit live switches.

• 5-year research: NOISE + fade 1,291 trades, 50% win, PF 1.33, +$25,345 at 1 micro, no losing full year. 21 win-rate filters and 22 account rules were tested; only the drawdown brake passed both halves. Projection, not a promise.

Next steps — start trading

1. **Pick the plan** on the Risk page that matches your Lucid accounts (the app applies one plan's firm rules to all accounts).

2. **TradingView webhooks**: keep the 4 alerts pointing at your Cloudflare tunnel URL + webhook secret; MNQ1! 1-minute HEARTBEAT must be running (NOISE needs 10 stored RTH sessions before its first trade — the Strategy page shows the warm-up counter). Remember: TradingView Essential alerts expire every 2 months.

3. **When heartbeats show on the Dashboard** (Markets panel / Signals page): add each Lucid account on the Automation page — Tradovate account ID, stage (EVAL/FUNDED), starting balance = the account size (this drives the automatic size).

4. **Connect Tradovate** on Connections (token kept encrypted; password never stored). Run the pre-flight check; do the daily external-positions attestation; arm + select the accounts.

5. **Run PAPER first** for at least 5 sessions (automation starts OFF → SEMI → FULL). Compare paper fills with the Strategy page numbers; only then use the live switches (PAYTIENCE_ALLOW_LIVE + typed confirmation + Live-Readiness Checklist).

6. **Start with Regular sizing and 1–2 accounts**; add accounts and consider High risk on 150K once live results track the projection.

7. **TradingAgents + Vibe-Trading**: they stay ADVISORY. Every daily call is scored in the calibration ledger; once ≥ 30 calls are proven (lower 90% Wilson bound of the hit rate ≥ 70%, Brier < 0.25) the app lets a strongly-agreed call block the opposite NOISE side. That ledger is the feedback loop for refining their prompts/inputs (OpenBB data can be added as an input source next).

Not modeled: open-trade drawdown vs the trailing limit, news days, eval fees/resets, slippage beyond 1 tick. Past results do not guarantee future results.
